DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities:

- On page 3, line 7, change "Fig. 3" to -- Fig. 4 --.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 8-12 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gwyn et al (US. Pat. No. 2,476,145).

Gwyn discloses a method wherein sheets of glass are electrostatically charged (corresponding to the claimed "charging a first glass sheet") and moved along a conveyor to be dusted with a conductive layer of flour which is oppositely charged. After the treatment of the glass sheets in this manner they are stacked in a box (corresponding to the claimed "electrostatically adhering said first sheet to a second glass sheet/forming a composite of two electrostatically adhered glass sheets"). While Gwyn may not specifically state that the combined sheets are further processed and separated, these limitations are not deemed to impart a patentable distinction over Gwyn since it follows that the sheets would obviously be transported and delivered (corresponding to the claimed "processing") to their final destination where they would

be unpacked (which would ultimately involve separating/peeling the sheets apart) for a particular use.

Regarding claims 8-10, grounding the glass sheets and the use of a corona source to charge said sheets are all conventional practices with respect to electrostatic charging of materials and, therefore, do not patentably distinguish the claims from the Gwyn reference.

Allowable Subject Matter

4. Claims 2-7, 13 and 15-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 18-22 are allowed.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
